

EDI Environmental Dynamics Inc. (EDI) provides commercial SCUBA diving services for a wide range of biological and technical applications including, environmental monitoring, baseline environmental assessment and inspection monitoring and documentation of underwater habitats and infrastructures. EDI's commercial dive team, certified to WCB and CSA standards, is made up of professional biologists and technicians with extensive expertise in environmental assessment.

Environmental Monitoring

- Installation, monitoring and maintenance of underwater habitat mitigation and compensation measures
- Aquatic lease biological monitoring
- Monitoring of invasive aquatic plants and animals
- COSEWIC listed aquatic and marine plant, invertebrate and fish monitoring
- Monitoring of marine/aquatic parks and protected areas

Baseline Assessments

- Visual identification of fish, invertebrate and plant species
- Fish and invertebrate population assessments
- Marine foreshore environmental assessments (MFEA)

Underwater Inspections

- Underwater videography
- Inspection of underwater habitat, quantification and utilization of habitat areas
- Inspection of underwater infrastructure including gates, docks, piling and channel control structures
