

# Raging River Hydropower Project

## Project Description

**Owner** *Raging River Power & Mining Inc.*  
**Location** *Port Alice, British Columbia*  
**Project Dates** *2007 – Present*

The Raging River Power Project involves the re-development of an existing hydropower facility on the shore of Benson Lake on Vancouver Island. The existing 2 MW powerplant is to be replaced with an 8 MW facility through the construction of a larger penstock and installation of new generating equipment. The facility features a 84 ha reservoir controlled by a large dam. Construction of this project is set to be completed in early 2012.

## Our Role in the Project

- Completing the Environmental Assessment required to obtain project permitting including:
  - Wildlife and vegetation
  - Water quality
  - Fish and invertebrate populations
  - Instream flow assessment
- Environmental monitoring for construction.
- Data collection and analysis to support the Long-Term Environmental Monitoring Program.
